SOFTWARE ENGINEER

PROFILE SUMMARY

Dynamic, data-driven Software Engineer with progressive years of experience demonstrating the in-depth technical background of the fundamental aspects, methods, and processes related to applications programming. Proficient in creating user interfaces, writing and testing codes, troubleshooting simple/complex issues, and implementing new features based on user feedback. Exemplify the abilities to swiftly adapt to recent technological advancements, recognize priority, formulate innovative solutions, and cultivate positive working relationships with staff and leaders of the organization. Possess the unmatched capacities to optimize web functionality to enhance workflow efficiencies, business productivity, and bottom-line profitability.

CORE COMPETENCIES

Software Development Lifecycle | Software Administration | Operating System | Engineering Management | Application Development | IT Service Management | Process Reengineering | Programming Languages | Computer Programming | Information System | Project Management | Technical Support | Software & Hardware Distribution Maintenance | Back-end Development | API Design | Resource Optimization | Data Visualization | Web Development | Customer Services | Cross-functional Team Leadership | Attention to Detail | Strategic Planning | Analytical Skills | Communication Skills

PROFESSIONAL WORK EXPERIENCE

Software Engineer | Mid Atlantic Distribution – Durham, NC   **Aug 2022 – Present**

Develop a unique e-commerce headless storefront and used graphql and rest APIs to connect to the bigcommerce back end.

- Plan a new front-end for an online store by designing and developing it and resolving multiple client-facing issues.
- Enhance the website's SEO and remediate issues that caused hours of delay in a system that was supposed to be near time.
- Utilize Postcss and Tailwind to style the site's CSS component modules and to develop reusable components and hooks using Typescript & React, contributing to the company's advancement and increasing market presence.
- Leverage technical expertise and offered direction in implementing distributed rate limiting throughout the enterprise.
- Investigate new and emerging software applications to design, select, implement and use administrative information.
- Engage in all stages of the system development life cycle, from requirements analysis to system implementation, while conducting research to test and evaluate the system's feasibility, design, operation, and performance.
- Define system problems and user needs, design and test standards solutions, implement computer system requirements, and develop software solutions to optimize operational efficiency and improve the automated system for all critical infrastructure.

Web Developer | Hiretalk – Raleigh, NC   **Nov 2021 –Aug 2022**

Provided expert technical support on web project feasibilities while conducting necessary server administration and maintenance.

- Oversaw the development of the Q&A app for the Q&A team to enhance processes and testing of the product.
- Implemented reactions to write the application's client-side and created custom hooks to ease code maintenance.
- Collaborated closely with the leading developer and efficiently used git-based source control to work with the team in Agile environment.
- Troubleshoot bugs from various websites and execute improvements significantly boosting web functionality and speed.
